

SUMMARY OF QUALIFICATIONS

- Computer Science student (Faculty of Computers and Artificial Intelligence, Cairo University) with a focus on systems architecture, networking, and cybersecurity.
- Google Cybersecurity Professional Certificate and Cisco Introduction to Cybersecurity holder, with hands-on exposure to Linux, packet analysis, intrusion detection, and SIEM tooling.
- Full-stack builder across C++, C#, Java, Python, and JavaScript, delivering role-based, database-backed applications from POS systems to desktop finance tools.
- Strong grounding in OOP, data structures, system design, and MVC/MVVM architecture, paired with entrepreneurship training from the TIEC program.

EDUCATION

Faculty of Computers and Artificial Intelligence, Cairo University (FCAI-CU)*Cairo, Egypt*

Bachelor of Science in Computer Science — Junior Year

CERTIFICATIONS

- Google Cybersecurity Professional Certificate — Coursera, July 2026 (ID: K6NTV8EXB5C4)
- Introduction to Cybersecurity — Cisco Networking Academy / ELCC, July 2026 (Cert ID: 37e0d267-e1a1-4775-94f7-39129009cf6c)
- TIEC Entrepreneurship Program — Creativa Innovation Hub

TECHNICAL SKILLS

Programming Languages: C++, C#, Python, Java, JavaScript, SQL, HTML, CSS

Databases: SQL Server, SQLite, Relational Database Schemas

Networking & Cybersecurity: Linux, Wireshark, Nmap, SIEM Tools, Intrusion Detection Systems (IDS), Cisco Networking Foundations

Concepts & Architecture: OOP, Data Structures, System Design, MVC / MVVM Patterns

Tools: Git, Zsh, Alacritty Terminal

KEY PROJECTS

POS & Retail Management System*JavaScript, HTML5, Tailwind CSS*

- Built a full-featured Point of Sale (POS) application with real-time catalog search and transaction logging.
- Implemented Role-Based Access Control (RBAC) with PIN authentication, separating Admin capabilities (cashier account creation, sales reports, inventory management) from Cashier interfaces.
- Integrated a customer database, automated stock deduction, and custom discount logic across the checkout flow.

Timeless Wisdom Library*Web Application*

- Developed a web-based digital library platform for managing and displaying book collections.
- Integrated catalog browsing, book categorization, detail tracking, and persistent state management.

Masroofy — Expense & Finance Management App*Java, SQLite*

- Co-developed a Java desktop application structured on MVC/MVVM design patterns backed by a local SQLite relational database.
- Configured system class diagrams, verified database schema integrity, and authored a comprehensive Software Requirements Specification (SRS).

Advanced Audio Player*C++, JUCE Framework*

- Built a cross-platform desktop audio application handling real-time audio playback and signal processing.

Tactical Game Engine*C++*

- Programmed a scalable, multi-variant game engine demonstrating core OOP principles and extensible system architecture.

Baby Photoshop — Image Manipulation Tool*C++*

- Developed a console-based application implementing custom pixel-level image filtering and algorithmic transformations.

Student Database CRUD System*JavaScript, LocalStorage*

- Engineered a front-end web application performing persistent CRUD operations on student records using browser LocalStorage.
